

terraplak

Indestructible

Affordable

Productive

Sustainable and safe

The 3L Terraplak protection and access plates protect the ground and form a temporary pathway on sand, wet soils and other difficult terrains.

Our plates eliminate ruts, mired machinery and time losses pertaining to the restoration of ground damaged by multiple passages. They improve the productivity, cleanliness and safety of your projects!

They can also form large work areas and temporary flooring surfaces and also various industrial and commercial applications. Here are some examples:

- Construction site,
- Stadiums, events and shows,
- Oil or mining exploration,
- Well drilling,
- Temporary parking,
- Bridges and roads construction sites,
- Mobile homes,
- Structures moving,
- Pavement work,
- Landscaping,
- Installation of swimming pools,
- Cemeteries,
- Golf,
- Protection of sensitive environments,
- Roads or temporary passages
- and more...

Leave a clean wake and eliminate the restoration work !

Wood does not offer sufficient protection, lacks sustainability and results in waste.

Steel is expensive, too heavy, and difficult to handle.

Increase the quality and productivity of your projects...

Terraplak, the affordable and logic solution!

Technical specifications

- ✓ High density polyethylene, moulded in one piece,
